METHOD AND APPARATUS OF DNA COLLECTION

CLAIMS

Having thus described the invention, what is claimed as new and desired to be secured by Letters Patent is as follows:

- A kit for the collection of material containing DNA comprising :
 - a housing containing at least one collection device for collecting material containing DNA, and
 - a treatment applied to said housing containing said at least one material collection device.
 - 2. The kit as claimed in claim 1 wherein said housing containing said device is treated with an effective quantity of an agent for disabling DNA from interfering with subsequent specimen specific DNA analysis.
 - 3. The kit as claimed in claim 2 wherein said agent comprises exposure to gamma radiation.
 - 4. The kit as claimed in claim 2 wherein said agent comprises exposure to ethylene oxide.
- 5. The kit as claimed in claim 2 wherein said agent comprises exposure to an ion beam.
- 18 6. The kit as claimed in claim 2 wherein said agent comprises exposure to electron beam ionization.

	INVEN TITLE:				
1	7.	A method of preventing contamination of a kit for collection of material containing			
2	DNA,	DNA, the contamination being the presence of DNA on kit components prior to			
3		collection of a DNA sample, the method comprising the steps of:			
4		placing the kit components within a housing,			
5		exposing said housing containing said kit components to an effective quantity of			
6		an agent for disabling DNA from interfering with subsequent specimen			
7		specific DNA analysis.			
8	8.	The method as claimed in claim 7 wherein said exposing step comprises			
9	expo	sure to gamma radiation.			
10	9.	The method as claimed in claim 7 wherein said exposing step comprises			
	expo	sure to ethylene oxide.			
TI.) 92	10.	The method as claimed in claim 7 wherein said exposing step comprises			
13 13	exposure to an ion beam.				
 	11.	The method as claimed in claim 7 wherein said exposing step comprises			
11 15 11 11 11 11 11 11 11 11 11 11 11 1	exposure to an electron beam ionization.				
16	12.	A method for collection of DNA-containing material from the surface of the skin			
17	of a	of a subject comprising:			
18		contacting a collecting surface of a collection device with the skin of the subject,			
19		and			
20		collecting DNA-containing material of the subject.			
21	13.	The method as claimed in claim 12 wherein said collecting surface is treated with			
22	a we	etting agent.			

SANGHA, Jangbir INVENTOR:

METHOD AND APPARATUS OF DNA COLLECTION TITLE:

- The method as claimed in claim 12 wherein said collection device contacts the 14. 1 skin of the subject at the base of the nose of the subject. 2
- The method as claimed in claim 12 wherein said collection device contacts the 15. 3 skin of the subject behind the ear of the subject. 4
- The method as claimed in claim 12 further comprising the step of obtaining said 16. 5 collection device from a kit, said kit having been exposed to effective quantity of an agent for disabling DNA from interfering with subsequent specimen specific DNA 7 analysis.
 - The method as claimed in claim 16 wherein said agent is gamma radiation. 17.
 - The method as claimed in claim 16 wherein said agent is ethylene oxide. 18.
 - The method as claimed in claim 16 wherein said agent is an ion beam. 19.
 - The method as claimed in claim 16 wherein said agent is an electron beam 20. ionization.

of material containing DNA.

TITLE:

METHOD AND APPARATUS OF DNA COLLECTION

- 36. A device for collection of material containing DNA from the surface of a the cheek within the mouth while avoiding collection of material containing DNA from the tongue, gums or teeth, the device comprising:
 - a collection portion, said collection portion having a front surface and a rear surface, said rear surface having a covering thereon to prevent collection of material containing DNA from the tongue and said front surface is available for contacting the inside of the subject's cheek for collection of material containing DNA.
- 37. The device as claimed in claim 36 wherein prior to use said device is contained within a treated housing, said housing having been treated with an effective quantity of an agent for disabling DNA from interfering with subsequent specimen specific DNA analysis
- 38. A device for collection of material containing DNA from the surface of a the tongue while avoiding collection of material containing DNA from the adjacent mouth tissue, the device comprising:
 - a collection portion, said collection portion having a front surface and a rear surface, said rear surface having a covering thereon to prevent collection of material containing DNA from mouth tissue adjacent to the tongue and said front surface is available for contacting the subject's tongue for collection of material containing DNA.
- 39. The device as claimed in claim 38 wherein prior to use said device is contained within a treated housing, said housing having been treated with an effective quantity of an agent for disabling DNA from interfering with subsequent specimen specific DNA analysis.

1	40.	A method of collecting material containing DNA from a subject comprising the		
2	steps	steps of:		
3		placing a device for collecting material containing DNA within a housing,		
4		exposing said housing and said device placed in said housing to an effective		
5		quantity of an agent for disabling DNA from interfering with subsequent		
6		specimen specific DNA analysis,		
7		restraining the subject; and		
8		wiping said device on the skin of the subject.		
9	41.	The method as claimed in claim 40 wherein said exposing step comprises		
₂ 10	exposure to gamma radiation.			
C) T)	42.	The method as claimed in claim 40 wherein said exposing step comprises		
12	exposure to ethylene oxide.			
*.』 』13	43.	The method as claimed in claim-40 wherein said exposing step comprises		
	exposure to an ion beam.			
14. 15. 14. 15. 16.				
115	44.	The method as claimed in claim 40 wherein said exposing step comprises		
exposure to		osure to electron beam ionization.		
17	45.	The method as claimed in claim 40 wherein said wiping step is performed on the		
18	skin	behind the ear of the subject.		
19	46.	The method as claimed in claim 45 wherein said wiping step further comprising		
20	the	step of approaching a subject from behind to perform said wiping step.

TITLE: METHOD AND APPARATUS OF DNA COLLECTION

- The kit as claimed in claim 47 wherein said substrate is comprised of an adhesive material applied to the surface of said substrate.
 - 56. A kit for the collection of DNA from a subject comprising a tubular holder containing a sample collection portion, and a retraction mechanism connecting said sample portion to said holder, said retraction mechanism allowing said portion to be extended from said holder for sample collection and said retraction mechanism allowing said portion to be retracted into said holder for sample storage.
 - 57. The kit as claimed in claim 56 wherein said holder containing said sample portion is placed into a housing and said housing containing said paper is exposed to an effective quantity of an agent for disabling DNA from interfering with subsequent specimen specific DNA analysis.
 - 58. The kit as claimed in claim 57 wherein said agent comprises exposure to gamma radiation.
 - 59. The kit as claimed in claim 57 wherein said agent comprises exposure to ethylene oxide.
- 17 60. The kit as claimed in claim 57 wherein said agent comprises exposure to an ion beam.
- 19 61. The kit as claimed in claim 57 wherein said agent comprises exposure to electron beam ionization.

- 1 68. The kit as claimed in claim 67 wherein said agent comprises exposure to gamma radiation.
- 69. The kit as claimed in claim 67 wherein said agent comprises exposure to ethylene oxide.
- 70. The kit as claimed in claim 67 wherein said agent comprises exposure to an ion beam.
 - 71. The kit as claimed in claim 67 wherein said agent comprises exposure to electron beam ionization.
 - 72. The kit as claimed in claim 66 wherein said substrate is comprised of material selected from the group consisting of Whatman FTA, S&S IsoCode, S&S 903, and S&S 900.
 - 73. The kit as claimed in claim 66 wherein said sample portion is comprised of material selected from the group consisting of Dacron, nylon, plastic, cotton, and paper.
 - 74. The kit as claimed in claim 66 wherein said sample portion is comprised of an adhesive surface.
- 75. The kit as claimed in claim 74 wherein said adhesion properties of said adhesive surface are variable.

	11166			
1	76.	A kit for the collection of DNA from a subject comprising		
2	a san	a sample collection substrate for collection of DNA from a subject thereon, said		
3		substrate having a first side and a second side.		
4	said s	substrate having a protective layer on said first side to prevent contamination of

INVENTOR: SANGHA, Jangbir
TITLE: METHOD AND APPARATUS OF DNA COLLECTION

- 96. A method of collecting DNA-containing material from a subject comprising providing a sticky collection substrate, applying the fingerprint surface of the finger or thumb of the subject to said substrate, and allowing DNA-containing material from the fingerprint surface of the finger or thumb of the subject to adhere to said collection substrate.
- 97. A method of associating fingerprint evidence obtained from a subject with DNA evidence obtained from a subject comprising:
 providing a sticky collection substrate,
 applying a fingerprint surface of the finger or thumb of the subject to said
 substrate to generate a fingerprint of the subject in the substrate,
 allowing DNA-containing material from the fingerprint surface of the finger or
 thumb of the subject to adhere to said collection substrate, and
 recording an image of the generated fingerprint of the subject prior to use of the
 collection substrate for DNA analysis.

SANGHA, Jangbir **INVENTOR:**

METHOD AND APPARATUS OF DNA COLLECTION TITLE:

- A method of collecting fingerprint evidence from a subject and DNA evidence 98. from a subject comprising:
 - providing plurality of a sticky collection substrate portions,
 - applying a fingerprint surface of a finger or thumb of the subject to a first collection substrate portion to generate a first fingerprint in said first substrate portion,
 - reapplying said fingerprint surface of said finger or thumb to a second substrate portion to generate a second fingerprint in said second substrate portion, and
 - using said one of said first or second fingerprints in said first or second substrate portions for analysis of DNA-containing material collected from said fingerprint surface.

METHOD AND APPARATUS OF DNA COLLECTION

- 99. A method of avoiding prejudice of forensic specimen testing results at a forensic testing laboratory comprising:

 providing a specimen collection device, said device having a specimen collection portion and a subject information portion,

 obtaining a forensic specimen from a subject with said specimen collection portion,

 applying a first barcoded label to said specimen collection portion,

 applying a second barcoded label to said subject information portion, said second barcoded label having an identical barcode to said first barcoded label,

 transmitting said specimen collection portion with said first barcode to a laboratory for testing

 retaining said subject information portion.
- 100. The method as claimed in claim 100 wherein said forensic specimen is free DNA or DNA-containing material.
- 101. The method as claimed in claim 100 wherein said forensic specimen is a fingerprint or thumbprint.
- 102. The method as claimed in claim 100 wherein said forensic specimen is urine or other body fluid.
